

# HIV Syphilis Hepatitis C

**HIV, Syphilis and Hepatitis C** are all sexually transmitted blood borne infections (STBBIs).

This group of infections are all **more common** in SK than they were two years ago.

This means you have a **higher chance** of getting an infection if you have **unprotected sex** or **share supplies** used to smoke or inject drugs.

You can get tested at your local community health center or by calling your community health nurse.
